

# AVERAGES AND THE RANGE

DATE OF SOLUTIONS: 15/05/2018

MAXIMUM MARK: 75

# SOLUTIONS

GCSE (+ IGCSE) EXAM QUESTION PRACTICE

1. [Edexcel, 2017]

Averages and the Range [2 Marks]

Here is a list of numbers

12 19 12 15 11 15 12 13 17

Find the median.

11 12 12 12 13 15 15 17 19

MEDIAN = 13 (AI)

(M)  
[ARRANGE IN  
ORDER]

9 VALUES

$$\text{MIDDLE} = \frac{9+1}{2}$$

= 5TH VALUE

Here is a list of numbers.

12      15      14      17      22      19      13

Bridgit says,

“To work out the median you find the middle number,  
so the median of these numbers is 17”

Bridgit’s answer is **not** correct.

(a) What is wrong with Bridgit’s method?

SHE DOES NOT ARRANGE THEM IN ORDER  
OF SIZE (M1)

(1)

(b) Work out the range of the numbers in the list.

HIGHEST - LOWEST = 22 - 12  
(M1)

10 (M1)  
(2)

(c) Work out the mean of the numbers in the list.

(M1) 
$$\frac{12 + 15 + 14 + 17 + 22 + 19 + 13}{7}$$

16 (M1)  
(2)

Here are Ryan's scores in nine French tests.

4      6      4      7      8       $a$       6      7      7

The mean of Ryan's nine scores is 6

Work out the value of  $a$ .

$$\begin{aligned} \text{TOTAL} &= 9 \times 6 \\ &= \underline{54}. \quad (1) \end{aligned}$$

$$4 + 6 + 4 + \dots + 7 = 49 \quad (1)$$

$$\begin{aligned} a &= 54 - 49 \\ &= \underline{5} \end{aligned}$$

$$a = \underline{5} \quad (1)$$

The manager of a clothes shop recorded the size of each dress sold one morning.

10	10				
12	12				
14	14	14	14	14	14
16	16	16	16		
18	18	18			
20	20	20			

The sizes of dresses are always even numbers.

The mean size of the dresses sold that morning is 15.3

The manager says,

“The mean size of the dresses is **not** a very useful average.”

(i) Explain why the manager is right.

MANAGER WANTS TO KNOW SIZES OF DRESSES TO ORDER, BUT  
THERE ARE NO DRESSES OF SIZE 15.3 (C1)

(ii) Which is the more useful average for the manager to know, the median or the mode?

You must give a reason for your answer.

THE MODE IS THE BEST AVERAGE IN THIS SITUATION  
BECAUSE IT GIVES THE MOST POPULAR SIZE, WHICH  
IS EXACTLY WHAT THE MANAGER WANTS TO KNOW.

(C1)

[NOTE THAT 'C1' IS A 'COMMUNICATION' MARK  
AND SO THERE MUST BE SUFFICIENT EXPLANATION  
OR A CLEARLY STATED REASON]

Six numbers have a mean of 5

$$\rightarrow \text{TOTAL} = \underline{\underline{30}} \text{ (B1)}$$

Five of the numbers are

3      2      7      6      2

The other number is  $x$ .

Work out the value of  $x$ .

$$3 + 2 + 7 + 6 + 2 = 20 \text{ (M1)}$$

$$30 - 20 = \underline{\underline{10}}$$

$$x = \text{.....} \begin{array}{c} \text{(A1)} \\ 10 \end{array}$$

Here are 8 cards.

There is a number on each of six cards.  
Two cards are blank.

Uzma wants the mean of the numbers on the 8 cards to be 4  
She wants the range of the numbers on the 8 cards to be 9

Find the numbers that she should write on the two blank cards.

$$\text{TOTAL NEEDS TO BE } 8 \times 4 = 32 \quad \text{(B1)}$$

$$\text{CURRENT TOTAL IS } 3 + 1 + 5 + \dots = 19$$

$$\therefore \text{ LAST TWO MUST ADD TO } 32 - 19 = 13$$

RANGE MUST BE 9.

CURRENT LOWEST IS 1

$\therefore$  HIGHEST MUST BE 10  $\rightarrow$  ..... 10 ..... and ..... 3 .....

(A1) [BOTH]

Here is a list of numbers written in order of size.

3    6     $x$      $y$

The numbers

have a median of 8

have a mean of 11  $\rightarrow$  TOTAL =  $11 \times 4$

Find the value of  $x$  and the value of  $y$ .

$$= \underline{\underline{44}} \rightarrow \textcircled{B1}$$

$\boxed{3}$      $\boxed{6}$      $\boxed{10}$      $\boxed{\phantom{00}}$

$\boxed{1ST}$

MEDIAN = 8

$\boxed{2ND}$

$$y = 44 - (3 + 6 + 10)$$

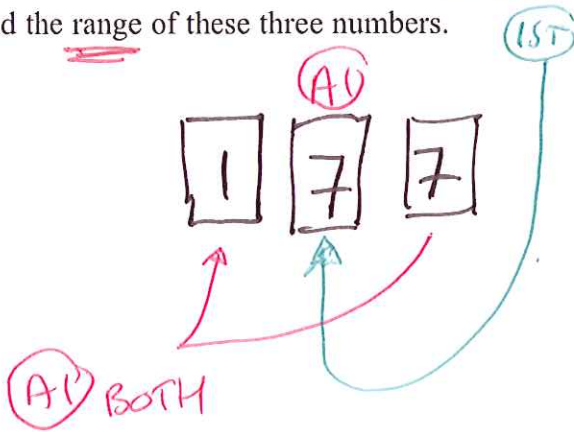

$$= \underline{\underline{25}}$$

$$x = \underline{\hspace{2cm}} 10 \textcircled{A1}$$

$$y = \underline{\hspace{2cm}} 25 \textcircled{A1}$$

Three positive whole numbers have a median of 7 and a mean of 5.  $\text{TOTAL} = 15$

Find the range of these three numbers.

$$15 - 7 = 8 \quad (\text{SO FIRST AND THIRD ADD TO 8})$$

$$\text{RANGE} = 7 - 1 = \underline{6}$$

- (a) Four numbers have a mean of 6  
Three of the numbers are 3, 7 and 10  
 Find the other number.

TOTAL = 20

TOTAL =  $4 \times 6$   
 = 24 (B1)

$24 - 20 = \underline{4}$

$\begin{array}{r} 4 \\ \hline \end{array}$  (A1)  
 (2)

- (b) Three numbers have a mode of 5 and a mean of 6  
 Find the three numbers.

MODE (TOTAL = 10)

$18 - 10 = \underline{8}$

$\begin{array}{r} 8 \\ \hline \end{array}$  (A1)  
 (2)

- (c) Find four numbers which have a mode of 7 and a median of 6

MEDIAN = 6

ANY  
 NUMBER  
 LESS THAN 5

$\begin{array}{r} 4, 5, 7, 7 \\ \hline \end{array}$  (A1) (A1)  
 (2)

OR ANY  
 NUMBER  
 LESS THAN 4.

The mean height of a group of 4 girls is 158 cm.

(a) Work out the total height of the 4 girls.

$$4 \times 158$$

$$\begin{array}{r} 632 \\ \hline \end{array} \text{ cm} \quad \text{(1)}$$

Sarah joins the group and the mean height of the 5 girls is 156 cm.

(b) Work out Sarah's height.

$$5 \times 156 = 780 \quad \text{(1)}$$

$$780 - 632 = \underline{\underline{148}} \quad \text{(2)}$$

$$\begin{array}{r} 148 \\ \hline \end{array} \text{ cm} \quad \text{(3)}$$

$w, x, y$  and  $z$  are 4 integers written in order of size, starting with the smallest.

The mean of  $w, x, y$  and  $z$  is 13

The sum of  $w, x$  and  $y$  is 33

$$\begin{aligned} \text{TOTAL} &= 4 \times 13 \\ &= \underline{52} \quad (B1) \end{aligned}$$

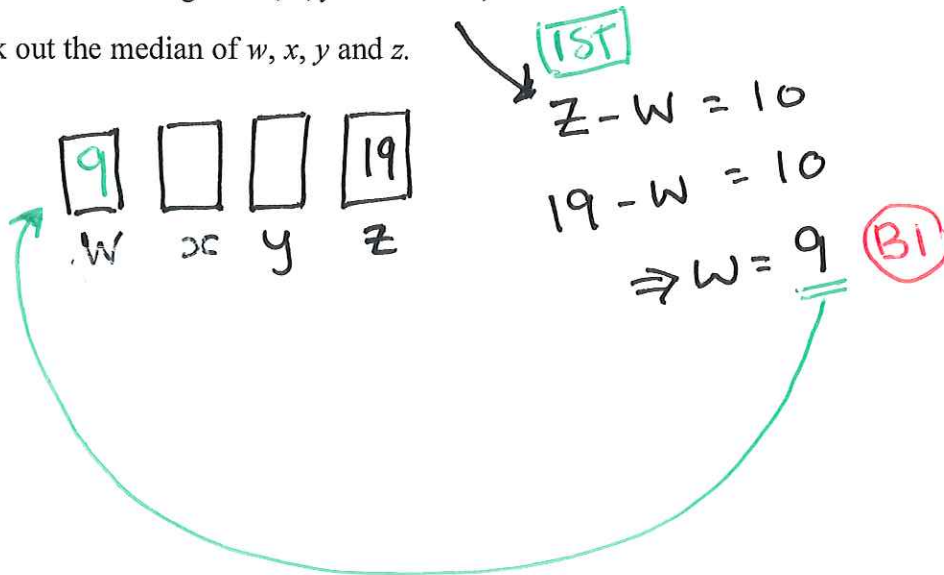

(a) Find the value of  $z$ .

$$z = 52 - 33$$

$$z = \frac{19}{(2)} \quad (A1)$$

Given also that the range of  $w, x, y$  and  $z$  is 10,

(b) work out the median of  $w, x, y$  and  $z$ .

$$\begin{aligned} x + y &= 52 - (9 + 19) \\ &= 24 \end{aligned}$$

$$\therefore \frac{x + y}{2} = \underline{12} \quad [\text{MEDIAN}] \quad (A1)$$

Three positive whole numbers have a mean of 4 and a range of 7

Find the three positive whole numbers.

1 3 8

$$\text{TOTAL} = 3 \times 4 \\ = 12$$

POSSIBILITIES!

1 AND 8

2 AND 9

3 AND 10

ETC

SUM IS TOO BIG!

IF 1 AND 8, THIRD NUMBER = 3

IF 2 AND 9, THIRD NUMBER = 1

RANGE OF 8! (NOT POSSIBLE)

1 3 8

(A1)

(B1) FOR SEEING TOTAL = 12

The mean height of a group of 6 children is 165 cm.  
One child, whose height is 155 cm, leaves the group.

Find the mean height of the remaining 5 children.

$$\begin{aligned}\text{TOTAL HEIGHT TO START} &= 6 \times 165 \\ &= \underline{\underline{990}} \quad (B1)\end{aligned}$$

$$\begin{aligned}\text{TOTAL HEIGHT AFTER CHILD} \\ \text{LEAVES} &= 990 - 155 \\ &= \underline{\underline{835}} \quad (B1)\end{aligned}$$

$$\begin{aligned}\text{MEAN HEIGHT OF} \\ \text{REMAINING FIVE} &= \frac{835}{5} \\ &= \underline{\underline{167}} \text{ cm} \quad (A1)\end{aligned}$$

There are 10 boys and 20 girls in a class.  
The class has a test.

→ CLASS SIZE = 30

The mean mark for all the class is 60  
The mean mark for the girls is 54

Work out the mean mark for the boys.

$$\begin{aligned} \text{TOTAL MARK FOR WHOLE CLASS} &= 60 \times 30 \\ &= \underline{1800} \end{aligned}$$

$$\text{TOTAL FOR THE GIRLS} = 54 \times 20 = \underline{1080}$$

(M1)  
[EITHER]

$$\begin{aligned} \therefore \text{BOYS TOTAL} &= 1800 - 1080 \\ &= 720 \quad (\text{M1}) \end{aligned}$$

$$\text{MEAN OF BOYS} = \frac{720}{10}$$

$$= \underline{\underline{72}} \quad (\text{A1})$$

A group of students take a test.

The group consists of 12 boys and 8 girls.

The mean mark for the boys is 18

The mean mark for the girls is 16.5

Calculate the mean mark for the whole group.

$$\begin{aligned} \text{TOTAL} &= 12 \times 18 \\ &= \underline{\underline{216}} \end{aligned}$$

$$\begin{aligned} \text{TOTAL} &= 8 \times 16.5 \\ &= \underline{\underline{132}} \end{aligned}$$

TOTAL FOR BOTH BOYS AND GIRLS

$$216 + 132 = 348$$

$$\text{MEAN MARK} = \frac{348}{20}$$

$$= \underline{\underline{17.4}}$$

17.4

Three positive whole numbers are all different.  
 The numbers have a median of 8 and a mean of 6  
 Find the three numbers.

$$\begin{aligned} \text{TOTAL} &= 6 \times 3 \\ &= \underline{\underline{18}} \end{aligned}$$

THESE TWO  
ADD TO 10

POSSIBLES:

0 8 10 X ZERO IS NOT POSITIVE

1 8 9

2 8 8 X NOT ALL DIFFERENT

(B1) 8 IS MEDIAN

(B1) ALL POSITIVE AND ADD TO 18

1, 8, 9

There are 30 apples in a box.

The mean weight of these 30 apples is 120 grams.  $\rightarrow$  TOTAL WEIGHT = 3600 g

There are 10 apples in a bag.

The mean weight of these 10 apples is 95 grams.  $\rightarrow$  TOTAL WEIGHT = 950 g

Work out the mean weight of the 40 apples.

$$\text{MEAN} = \frac{3600 + 950}{40}$$

(mi)

(mi)  
[EITHER]

113.75 grams

(AI)

Walkden Reds is a basketball team.

At the end of 11 games, their mean score was 33 points per game.

At the end of 10 games, their mean score was 2 points higher.

Jordan says,

“Walkden Reds must have scored 13 points in their 11th game.”

Is Jordan right?

You must show how you get your answer.

$$\text{TOTAL AFTER 11 GAMES} = 11 \times 33 = \underline{363} \quad (\text{mi})$$

$$\text{TOTAL AFTER 10 GAMES} = 10 \times 35 = \underline{350} \quad (\text{mi})$$

$$\text{POINTS SCORED IN 11TH GAME} = 363 - 350$$

$$= \underline{\underline{13}}$$

[SO JORDAN IS CORRECT] (A1)

[WORKING  
MUST BE  
SHOWN]

Zara must take 5 tests.

Each test is out of 100

After 4 tests, her mean score is 64%.

$$\rightarrow \text{TOTAL} = 4 \times 64 = 256$$

(B1)

What score must Zara get in her 5th test to increase her mean score in all 5 tests to 70%?

$$\text{TOTAL NEEDS TO BE } 5 \times 70 = 350$$

(B1)

$$\text{SO SHE NEEDS } \frac{350 - 256}{(M1)} = \underline{\underline{94}} \quad (A1)$$

- (a) Three positive whole numbers are all different.  
They have a median of 5 and a mean of 4.  
Find the three numbers.

→ TOTAL = 12

$$1^{ST} + 3^{RD} = 12 - 5 = 7$$

1 + 6	→	NOT POSSIBLE
2 + 5		
3 + 4		

1, 5, 6 OR 2, 5, 5  
(2)

- (b) Find four whole numbers which have a mode of 5 and a median of 6.

↑  
AT LEAST TWO 5s

↑  
ANY NUMBER  
BIGGER THAN 7

CAN BE  
9, 10, 11, ETC.

5, 5, 7, 8  
(2)

The mean of four numbers is 2.6

One of the four numbers is 5

Find the mean of the other three numbers.

$$\longrightarrow \text{TOTAL} = 4 \times 2.6$$

$$= 10.4 \text{ (BT)}$$

$$10.4 - 5 = 5.4$$

(MT)

$$\frac{5.4}{3} = \underline{\underline{1.8}} \text{ (AT)}$$

Three numbers  $a$ ,  $b$  and  $c$  have a median of 4 and a range of 7

- (a) Find the median of the three numbers  $a+2$ ,  $b+2$  and  $c+2$

$$\begin{aligned} \text{NEW MEDIAN} &= \text{MEDIAN} + 2 \\ &= 4 + 2 \end{aligned}$$

- (b) Find the range of the three numbers  $a+2$ ,  $b+2$  and  $c+2$

R RANGE IS UNCHANGED

(A)  
6  
.....  
(1)

(A)  
7  
.....  
(1)

$a, b, c$  and  $d$  are four integers.

Their mean is 8

Their mode is 7

Their median is 7.5

$$\begin{aligned} \text{TOTAL} &= 4 \times 8 \\ &= \underline{\underline{32}} \end{aligned}$$

(a) Find the value of the largest of the four integers.

10  
(2)

(b) Find the mean value of the numbers  $(2a - 3)$ ,  $(2b - 3)$ ,  $(2c - 3)$  and  $(2d - 3)$ .

$\nearrow$   
 ALL VALUES ARE DOUBLED  
 THEN 3 IS SUBTRACTED  
 [SAME HAPPENS TO THE MEAN]

So

$$\begin{aligned} \text{NEW MEAN} &= 2 \times 8 - 3 \\ &= \underline{\underline{13}} \end{aligned}$$

## Disclaimer

While reasonable endeavours have been used to verify the accuracy of these solutions, these solutions are provided on an “as is” basis and no warranties are made of any kind, whether express or implied, in relation to these solutions.

There is no warranty that these solutions will meet Your requirements or provide the results which You want, or that they are complete, or that they are error-free. If You find anything confusing within these solutions then it is Your responsibility to seek clarification from Your teacher, tutor or mentor.

Please report any errors or omissions that You find\*. These solutions will be updated to correct errors that are discovered. It is recommended that You always check that You have the most up-to-date version of these solutions.

The methods used in these solutions, where relevant, are methods which have been successfully used with students. The method shown for a particular question is not always the only method and there is no claim that the method that is used is necessarily the most efficient or ‘best’ method. From time to time, a solution to a question might be updated to show a different method if it is judged that it is a good idea to do so.

Sometimes a method used in these solutions might be unfamiliar to You. If You are able to use a different method to obtain the correct answer then You should consider to keep using your existing method and not change to the method that is used here. However, the choice of method is always up to You and it is often useful if You know more than one method to solve a particular type of problem.

Within these solutions there is an indication of where marks **might** be awarded for each question. B marks, M marks and A marks have been used in a similar, but **not identical**, way that an exam board uses these marks within their mark schemes. This slight difference in the use of these marking symbols has been done for simplicity and convenience. Sometimes B marks, M marks and A marks have been interchanged, when compared to an examiners’ mark scheme and sometimes the marks have been awarded for different aspects of a solution when compared to an examiners’ mark scheme.

B1 - This is an unconditional accuracy mark (the specific number, word or phrase must be seen. This type of mark cannot be given as a result of ‘follow through’).

M1 - This is a method mark. Method marks have been shown in places where they might be awarded for the method that is shown. If You use a different method to get a correct answer, then the same number of method marks would be awarded but it is not practical to show all possible methods, and the way in which marks might be awarded for their use, within these particular solutions. When appropriate, You should seek clarity and download the relevant examiner mark scheme from the exam board’s web site.

A1 - These are accuracy marks. Accuracy marks are typically awarded after method marks. If the correct answer is obtained, then You should normally (but not always) expect to be awarded all of the method marks (provided that You have shown a method) and all of the accuracy marks.

Note that some questions contain the words ‘show that’, ‘show your working out’, or similar. These questions require working out to be shown. Failure to show sufficient working out is likely to result in no marks being awarded, even if the final answer is correct.

\* The best way to inform of errors or omissions is a direct Twitter message to @Maths4Everyone
